

Force Sensor KD34s 5N

Item number: 5658

The force sensor KD34s was specially designed for measuring of the smallest forces. Due to integrated stop against overload is this sensor also in measuring range of 0,25 N and 0,5 N even safer to use. In the 0,5 N version special strain gauges of platinum- nickel alloy are used with higher input sensitivity by factor 2 to conventional strain gauges of constantan.

The stiffness of the sensors 0.25N and 0.5N is therefore identical.

In addition to M3 threads for the force transmission, force sensor also has boreholes diameter Ø2, which are used for orientation of the force sensor or for mounting of adapters.
